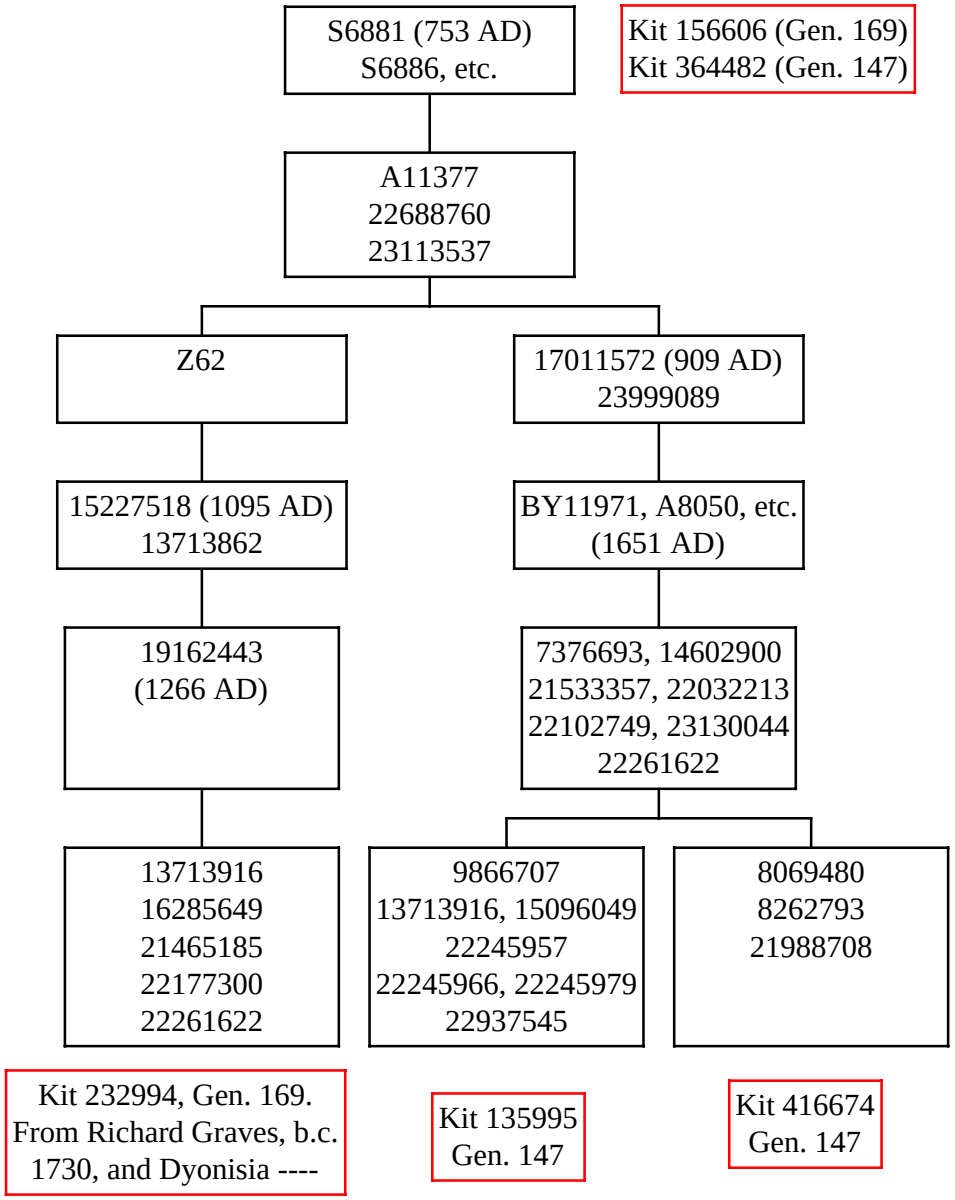
Y-DNA GROUP R1-169b
MALE GRAVES DESCENDANTS VIA SNP S6881
SNP TREE FROM ADVANCED TESTING

(Rev. 15 Nov. 2016)



S15663, Z62 and A8050 are known SNPs. The novel variants listed here were from Big Y tests at Family Tree DNA, but new SNPs will be added as more is learned. This is a subset of the R Haplogroup Y-SNP chart at www.gravesfa.org/R-Y-SNP-chart.pdf. The genealogy chart for this is at www.gravesfa.org/DNAchart169.pdf.

The Graves members of this Y-DNA group can be seen on the public Y-DNA results chart of the Graves DNA project on the Family Tree DNA website.

This chart has been modified to try to conform to the most recent analysis of 700 Big Y results being studied by the R-U106 project. Based on these results, it is apparent that gen. 169 (from son Thomas) and gen. 147 are not from a common Graves ancestor since the adoption of surnames. It also appears that at least some of the descendants of SNP S6881 may be descended from men who lived in the Saxon village of Warburton on the river Mersey in the 10th century, now part of Greater Manchester, England, and who lived later in nearby villages such as Tottington and Bury.
